

mBank CompanyNet

Structure of data files import to mBank CompanyNet system in pain.001.001.09* (ISO20022) format

Based on recommendation of Polish Bank Association (ZBP)

Electronic Banking for Corporates and SME

Version 1.1.0, 12-01-2025

* if you need pain.001.001.03, please contact the Customer Centre. We recommend pain.001.001.09

Index

1.	General remarks	3
2.	Structure of XML file	5
3.	Rules of recognizing types of payments and payment's parameters kept in <PmtInf> block.	7
4.	Split payment - description of payment details in <Ustrd> field.	8
5.	"White list" validation mechanism - description of payment details in the <PmtTpInf> field	8
6.	Order types	9
6.1.	Domestic transfer (internal transfer to beneficiary accounts held in mBank)	9
6.2.	Domestic transfer in PLN currency to Polish banks, including SORBNET & Social Insurance one*	12
6.3.	Express Elixir transfer	15
6.4.	BlueCash transfer	17
6.5.	Transfer in a currency other than PLN to Polish banks (foreign transfer)*	19
6.6.	Internal currency transfer	23
6.7.	Foreign transfer	25
6.8.	TAX transfer	29
6.9.	Postal transfer	32
6.10.	EuroEkspres transfer	34
6.11.	SEPA transfer	36
6.11.1.	SEPA transfer – identifier of legal and private person	39
7.	Examples of payments	41
7.1.	Example of standard domestic and foreign payment combined in one file	41
7.2.	Example of standard domestic payment, including split and payments marked for identification with the VAT White List	44
7.3.	Example of standard foreign payment	48
7.4.	Example of two SEPA payments with ultimate debtor and ultimate creditor	50
7.5.	Example of one SEPA payment without ultimate debtor and ultimate creditor	54
7.6.	Example of SEPA order without ultimate debtor/creditor. Example with code SEPA, transaction codes and cost of payment put in <PmtInf> header instead of <CdtTrfTxInf> (example concerns point 3 of document)	56
8.	History of changes	58

1. General remarks

1. Documentation presents rules of pain.001.001.09 usage in the [mBank CompanyNet](#) internet banking system, in a mechanism of placing orders in [mBank CompanyNet ConnectClassic](#) (from 1.1.1. version) and in [mBank CompanyConnect Developer](#).
2. File format is based on the XML ISO20022 standard published by the ISO organization.
3. [Bank recommends](#) to validate file prepared by Customer in pain.001.001.09 format. [This file has to be agreed with a pain.001.001.09.xsd control file keeping schema rules](#). This additional control allows to avoid many unexpected situations during integration process.
4. XSD control file (pain.001.001.09.xsd) can be downloaded from the ISO20022 web site: https://www.iso20022.org/message_archive.page.
5. [mBank validates file structure according to pain.001.001.09 rules stored in the XSD control file](#).
6. pain.001.001.09 format is dedicated only for credit transfer orders. It means that direct debit orders is not offered in this format.
7. Additional remarks:
 - 7.1. It is recommended to place no more than 10 000 orders in one file.
 - 7.2. There could be several credit transfers of different types in one XML file.
 - 7.3. One XML file could have orders debiting more than one Customer account.
 - 7.4. There could be an information about only one payment date <ReqdExctnDt>, one ordering party <Dbtr>, one ordering party account <DbtrAcct> and additionally information about only one ultimate debtor <UltmDbtr> (in case of SEPA) in a given <PmtInf> block.
 - 7.5. <InstrId> tag with details, existing in <CdtTrfTxInf> block, is not required. On other hand, it is recommended in webservice used in [mBank CompanyNet ConnectClassic](#) and [mBank CompanyConnect Developer](#). <InstrId> is a technical number of a given order. It is not presented in turnovers.
 - 7.6. Details stored in <InstrId> in XML file cannot be used more than one time in mBank CompanyNet system for given Customer. It concerns only orders existing in mBank CompanyNet. In case order would be deleted permanently from the system, a value from <InstrId> field could can be placed in new order, in its <InstrId> tag again.
 - 7.7. Value presented in <MsgId> tag within the framework of <GrpHdr> of given file, is registered in mBank CompanyNet system. It can not be used more than one time. In situation that all orders from this file would be deleted permanently from the system, a value from <MsgId> field could can be placed in new file, in its <MsgId> tag.
 - 7.8. The values [true](#) and [false](#) in <BtchBookg> tag are ignored by mBank. All transactions will be booked separately.
 - 7.9. <EndToEndId> tag is used in pain.001.001.09 as customer order reference. This tag is required according to XSD schema, so Customer is allowed to use space character or **NOTPROVIDED** string as value in <EndToEndId> tag in order to avoid filling in the concrete reference number.
 - 7.10. [utf-8 page code is required](#). First line of XML file <?xml version="1.0" encoding="[utf-8](#)"?> keeps information about code page used in XML file.
8. Special characters; allowed characters:
 - 8.1. Fields could not contain the following characters (it doesn't concern Postal order): : * ; ' " ! + ? | #
 - 8.2. In case of postal orders, fields cannot contain sign: ",;
 - 8.3. Characters like &, <, > could not be used directly in XML file, in details of payment like beneficiary name etc. It is forbidden by an ISO20022 schema validation. You can use their equivalents accepted by ISO20022, that is: [&](#); [<](#); [>](#)
 - 8.4. Characters accepted in [foreign and SEPA payments](#):
[a b c d e f g h i j k l m n o p q r s t u v w x y z A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9 / - \(\) . , Space](#)
9. A complete syntax of the tag in XML file consists of two parts; first one informing about the beginning and second one informing about end of information kept in given tag.
 - 9.1. As example: if a <Document> tag appears, it means that at the end of information presented after this tag, there should be its ending part: </Document>. In case of <Document> and </Document> tag, user should expect some more XML structures according to ISO20022.

- 9.2. The same rules as described in point 9.1 concern most of tags presented in XML file.
- 9.3. Some tags have only values between their parts, like `<Nm>Name</Nm>`.
- 9.4. In a unique situation there could be space or no value in given tag, for example: `<Ustrd> </Ustrd>` or `<InitgPty/>`. `<InitgPty/>` occurrence or its equivalent `<InitgPty></InitgPty>` is possible in XML file according to schema but this way of presentation is allowed for only few tags.
10. Some tags like `<Document>` or `<InstdAmt>` have additional attributes in them, like currency code and its value in `<InstdAmt Ccy="EUR">` tag as example. Example:
`<InstdAmt Ccy="EUR">217.00</InstdAmt>`
11. Additional remarks to tables presented in 4th chapter
- 11.1. Additional sign like `+`, `++` is presented in **Name of XML part** column in order to describe nesting of given tag in XML file. For example: `++<Dbtr>` and `++<DbtrAcct>` means, that they are on the same nesting level in XML file.
 A syntax presented below means that within the framework of `<Dbtr>` element, there is a `<Nm>` sub element:

```

++<Dbtr>
++<Nm>[...]</Nm>
[...]
+</Dbtr>

```

Remarks presented above are shown in the following example.

```

<Dbtr>
  <Nm>NAME-1234567890</Nm>
</Dbtr>
<DbtrAcct>
  <Id>
    <IBAN>PL87114010100000123456789014</IBAN>
  </Id>
</DbtrAcct>

```

- 11.2. **FORMAT** column presents length and type of the given field: n = numeric, a = alphanumeric
- 11.3. If given tag is presented in a table in empty line, it means that this given tag does not keep any value but it consists of a group of other tags. A part of SEPA documentation presented below means that `<Amt>` tag contains other tag with values like currency order and amount of order. Next tag `<ChrgBr>` is on the same nesting level as `<Amt>` and informs about ways of the order charging.

+++<Amt>				
++++<InstdAmt@Ccy>	YES	3	Order currency – fixed value „EUR”	EUR
++++<InstdAmt>	YES	16.2	Order amount	99999.99
+++<ChrgBr>	YES	4a	Fixed value „SLEV”	SLEV

The values from the table are listed below to show how it could look in a XML file:

```

[...]
<Amt>
  <InstdAmt Ccy="EUR">5.00</InstdAmt>
</Amt>
<ChrgBr>SLEV</ChrgBr>
[...]

```

2. Structure of XML file

1. XML file contains:
 - 1.1. single sentence that defines the code page of data in a file (see point 3 below)
 - 1.2. main tag, which informs about beginning of the main document and defines the rules of data presentation in a file (see point 4 below)
 - 1.3. main block, which consists of few other blocks (see point 5 below)
 - 1.4. header block (see point 6 below)
 - 1.5. block or blocks grouping payments (point 7) and in each of them there is at least one block of a single transaction (see point 8 below).
2. Points 3-9 describe individual elements which appear in XML file. Section 10 presents the same information in form of table.
3. Sentence presented in first line of XML file specifies the code page of the file: `<?xml version="1.0" encoding="utf-8"?>`
4. Second line is called as document, referring to the `<Document>` tag. It appears after the line specifying a code page. The required wording is: `<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.09" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">`. It is a beginning of a all information blocks presented in XML format. This tag keeps also an information about ISO20022 format used in this file.
5. Third line is the tag opening a main block `<CstmrCdtTrfInittn>`, occurring only once. In this `<CstmrCdtTrfInittn>` block there are blocks `<GrpHdr>` and `<PmtInf>`.
6. The first block within the main block `<CstmrCdtTrfInittn>` is a header block called Group Header Block `<GrpHdr>`. This block occurs only once. It comprises a preamble consisting of a date and a unique message identifier. The header is common to all `<PmtInf>` blocks existing in a `<CstmrCdtTrfInittn>` one.
7. Block grouping of payments by a specific criterion / [Payment Information Block](#) `<PmtInf>` - the block which occurs in a file at least once. The block contains data on a payer's account, details of the specific execution date of the orders contained in this block. This block groups the orders according to these elements. It also contains at least one `<CdtTrfTxInf>` block with one transaction.
8. Block of a single transaction / [Transaction Information](#) `<CdtTrfTxInf>` - is a part of a `<PmtInf>` block. It is a mandatory block. It can occur many times within a block `<PmtInf>`. It contains the beneficiary data, data of the beneficiary's bank and the transaction details including the amount, transaction descriptions.
9. Elements which end the file are the final tag of the main block `</CstmrCdtTrfInittn>` and the final tag of the document, i.e. `</Document>`.
10. The structure of the XML file - diagram. Details possible to save as part of the XML element are described in the tables with the order within the 4th ([split payment details](#)) & 5th chapter ([all type of payments including split payment](#)).

Position in the file	Tag name / XML element, described in points 1-4	Number of occurrences	Comment
1	<code><?xml version="1.0" encoding="utf-8"?></code>	1	Beginning of the file
2	<code><Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.09" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"></code>	1	Record opening the document area in <code><Document></code> tag.
3	<code><CstmrCdtTrfInittn></code>	1	Record opening set of blocks with orders
4	<code><GrpHdr></code>	1	The opening of the header block
5	<code></GrpHdr></code>	1	Closing the header block
6	<code><PmtInf></code>	first occurrence in the file	Opening of the block grouping payment per account of payer and date of execution

7	<CdtTrfTxInf> and </CdtTrfTxInf>	1 and more within a given block <PmtInf>	Opening and closing of the block containing a single transaction within a given block <PmtInf>
8	</PmtInf>	1 and more within a given file	Closing block grouping payment per account of payer and date of execution
9	<PmtInf> </PmtInf>	Nth instance of the file	Another block grouping payments per account of payer and date of execution and containing the data described in point. 7
10	</CstmrCdtTrfInItN>	1	Sentence closing the set of all blocks with orders
11	</Document>	1	Sentence closing document and ending a given file

3. Rules of recognizing types of payments and payment's parameters kept in <PmtInf> block.

Bank allows to use values for the mode of execution of orders, identification of orders and the costs of their execution in the area of header block / s <PmtInf> instead of placing them at the level of individual transactions in the blocks <CdtTrfTxInf>. However, the Bank applies the principle of a higher priority for the information at the level of individual transactions in blocks <CdtTrfTxInf>, in case this information will appear on this level. Otherwise, for the transaction in the block <CdtTrfTxInf> values taken from a block header <PmtInf> are used. Examples are presented in the table below. In case of using the header block <PmtInf> to place the codes specifying the types of payments and their parameters, we recommend that each block <CdtTrfTxInf> should contain one type of transaction for given <PmtInf>.

Order type, modes of execution defined based on the tags used in the block header <PmtInf> and individual blocks <CdtTrfTxInf>.	The occurrence of the tag in the header block <PmtInf>	The occurrence of a tag within a <CdtTrfTxInf>
SEPA SCT order	<PmtTplnf><SvcLvl><Cd>SEPA</Cd> tag	<PmtTplnf><SvcLvl><Cd>SEPA</Cd> tag is optional or <SvcLvl><Cd>SEPA</Cd> tag is missing
Additional instruction codes for SEPA order.	<PmtTplnf><CtgyPurp><Cd> tag including ISO codes, according to SEPA rules. <PmtTplnf><CtgyPurp><Cd> tag is missing	<PmtTplnf><CtgyPurp><Cd> tag including ISO codes is optional or <PmtTplnf><CtgyPurp><Cd> tag including ISO codes, according to SEPA rules.
TAX (US) payment	<PmtTplnf><SvcLvl><Cd> tag is missing tag <PmtTplnf><CtgyPurp><Cd>TAXS</Cd> <PmtTplnf><CtgyPurp><Cd>TAXS</Cd> tag is missing	<PmtTplnf><SvcLvl><Cd> tag is missing tag <PmtTplnf><CtgyPurp><Cd>TAXS</Cd> is optional. or tag <PmtTplnf><CtgyPurp><Cd>TAXS</Cd>
Foreign and domestic (non PLN) payments – execution modes		
NORM –standard mode (D+2)	tag <PmtTplnf><InstrPrty>NORM</InstrPrty> <PmtTplnf><InstrPrty>NORM</InstrPrty> tag is missing	tag <PmtTplnf><InstrPrty>NORM</InstrPrty> is optional or tag <PmtTplnf><InstrPrty>NORM</InstrPrty>
HIGH – urgent mode (D+1)	tag <PmtTplnf><InstrPrty>HIGH</InstrPrty> <PmtTplnf><InstrPrty> – tag is missing	tag <PmtTplnf><InstrPrty>NORM</InstrPrty> or tag is optional or tag <PmtTplnf><InstrPrty>HIGH</InstrPrty>
HIGH & SDVA –express mode (D+0)	tag <PmtTplnf><InstrPrty>HIGH</InstrPrty> tag <PmtTplnf><SvcLvl><Cd>SDVA</Cd> <PmtTplnf><InstrPrty>HIGH</InstrPrty> and <PmtTplnf><SvcLvl><Cd>SDVA</Cd> tag are missing	Tag <PmtTplnf><InstrPrty>HIGH</InstrPrty> and <PmtTplnf><SvcLvl><Cd>SDVA</Cd> tag is optional or tag <PmtTplnf><InstrPrty>HIGH</InstrPrty> tag <PmtTplnf><SvcLvl><Cd>SDVA</Cd>
Type of charges for foreign payments, non-PLN domestic ones and SEPA payments	tag <ChrgBr>SHAR[or]SLEV[or]DEBT[or]CRED</ChrgBr> missing tag <ChrgBr>SHAR[or]SLEV[or]DEBT[or]CRED</ChrgBr>	<ChrgBr>SHAR[or]SLEV[or]DEBT[or]CRED</ChrgBr> tag is optional or tag <ChrgBr>SHAR[or]SLEV[or]DEBT[or]CRED</ChrgBr>

4. Split payment - description of payment details in <Ustrd> field.

1. Data is entered in one sequence, individual fields are preceded by code words included in the slash character.
2. Spaces between the code word and the sign are not allowed.
3. It is mandatory to preserve the order of individual code words. Each code word can only appear once. It is forbidden to insert code words as values of individual fields.

Field (code word)	Status	The field format	Description
/VAT/ A code word for the amount of VAT	M	/VAT/10n,2n	The VAT amount expressed in pennies, the separator between the total part of the amount and the decimal part is the comma mark ",". e.g., 23.00 Required field and > 0.00 and <= payment amount from message box 32B (gross amount for payment with VAT). In the case of personal transfer, the gross amount of the order in box 32B must be equal to the VAT amount indicated as the value of the field / VAT /
/IDC/ Commodity provider or service provider ID	M	/IDC/14x	Supplier's or service provider's identifier (VAT payer, invoice issuer) or Customer ID (Customer) in the case of own transfer. Required field and cannot be empty.
/INV/ The form or payment symbol	M	/INV/35x	VAT invoice number (including correcting invoice) or the words "OWN TRANSFER" or "PRZEKAZANIE WLASNE" (written without Polish diacritics) in the case of transferring funds between VAT accounts of the same Customer within the Bank - the value required by law. Required field and cannot be empty.
/TXT/	O	/TXT/33x	Any payment text (Up to 33 alphanumeric characters). Optional field.

Example: <Ustrd>/VAT/230000000,00/IDC/111111111/INV/2017/01/25/1/TXT/free text</Ustrd>

5. "White list" validation mechanism - description of payment details in the <PmtTpInf> field

1. The new marker will allow to activate the validation with the list of VAT accounts "White List " for supported payment formats (domestic and internal currency - as at 27.01.2020).
2. The structure of the new field at the transaction level is described in sections regarding the domestic and internal non-PLN payment format.

6. Order types

6.1. Domestic transfer (internal transfer to beneficiary accounts held in mBank)

Name of XML part	Required	Format	Description	Example
<?xml version="1.0" encoding="utf-8"?>

6.11.1. SEPA transfer – identifier of legal and private person

Identifier of legal person				
<OrgId>				
Name of XML element	Required	Format	Description	
+<AnyBIC>	NO	11a	BIC bank identifier	
OR				
+<LEI>	NO	20a	A 20-character alphanumeric unique legal entity identifier that identifies the parties to a transaction for reporting	
OR				
+<Othr>				
++<Id>	NO	35a	Identifier	
++<SchmeNm> +++<Cd>	NO	35a	Type of identifier	
or				
++<SchmeNm> +++<Prtry>			ISO values possible to put in field Othr/SchmeNm/Cd or Othr/SchmeNm/Prtry (field possible to choose by a Customer): DUNS - Data Universal Numbering System BANK – Bank Party Identification TXID – Tax Identification Number CUST – Customer Identification Number EMPL – Employee Identification Number GSIG - GSIG	
			Value for Name of identifier possible to put in only in Othr/SchmeNm/Prtry field.	
++<Issr>	NO	35a	Identifier issuer	
Identifier of natural person				
<PrvtId>				
Name of XML element	Required	Format	Description	
+<DtAndPlcOfBirth>				
++<BirthDt>	NO		Birth date	
++<PrvcOfBirth>	NO	35a	Province	
++<CityOfBirth>	NO	35a	City of birth	
++<CtryOfBirth>	NO	2a	Country of birth	
OR				
+<Othr>				
++<Id>	NO	35a	Identifier	
++<SchmeNm> +++<Cd>	NO	35a	Type of identifier	
or				
			ISO values possible to put in field Othr/SchmeNm/Cd or Othr/SchmeNm/Prtry (field possible to choose by a Customer): DRLC – Drivers License Number CUST – Customer Identification Number	

++<SchmeNm> +++<Prtry>			SOSE – Social Security Number ARNU – Alien Registration Number CCPT – Passport Number TXID – Tax Identification Number NIDN – National Identity Number EMPL – Employee Identification Number Value for Name of identifier possible to put in only in Othr/SchmeNm/Prtry field.
++<Issr>	NO	35a	Identifier issuer

7. Examples of payments

Details in some part can be different, regarding of Customer system creating [the ISO20022 pain.001.001.09 file](#).

In case Customer doesn't have a ERP system [with integrated tools](#) validating pain.001.001.09 format, Bank recommends to use external tools or mechanism which can validate files created in pain.001.001.09 format according to schema control file [pain.001.001.09.xsd](#). It allows to avoid any basic problems with integration.

7.1. Example of standard domestic and foreign payment combined in one file

```
<?xml version="1.0" encoding="utf-8"?>

It concerns all transactions in this block, so it was not presented on the <CdtTrfTxInf> level

8. History of changes

No	Changes	Description	Document version	Data of document modification
1	New document	New document describing pain.001.001.09 usage in mBank CompanyNet	1.0.0	2024-03-16
2	Changes in SEPA payment	<PstlAdr> is required in Beneficiary section.	1.0.1	2024-04-02
3	Changes in domestic orders to Polish banks in a currency other than PLN.	Domestic orders to Polish banks in currencies other than PLN are processed using the foreign order form. Field validations are the same as for a foreign order. We have removed the <Purp> field from being required. Nowadays it has a different meaning. Additionally, we have added an optional section for additional beneficiary data <Id>.	1.1.0	2025-01-12
4	Change in a foreign order.	We have removed the <Purp> field from being required. Nowadays it has a different meaning. Currently, it is an optional field for foreign orders. Additionally, we have added an optional section for additional beneficiary data <Id>.	1.1.0	2025-01-12
5	Minor changes.	We have corrected the entry regarding the requirement of the <PstlAdr> field for domestic orders in PLN. This field is not required. We have aligned the document numbering with the document numbering in the Polish version.	1.1.0	2025-01-12
